3. EXISTING CONDITIONS

3.1 Existing Roadway Characteristics

The street network serving the proposed project consists of a variety of roadways. The major roadways and arterials defined in the study area are listed and described below.

Table 1: Roadway Network

Functional Classification	Roadway	Speed Limit	Lanes	Street Parking	Sidewalk	Bike Facilities
Principal Arterial	Center Street	35 mph	4	No	Yes	Lanes
Minor Arterial	Steilacoom DuPont Rd SW	35-45 mph	2-3	No	S/O Station Dr	Signage
Local	International Place	25 mph	2	No	Yes	Paved Shoulders

3.2 Public Transit Service

Transit within the city is provided via two Sound Transit Express Bus routes. Route 592 – DuPont-Seattle provides service from DuPont to Downtown Seattle and runs from approximately 4:00 AM to 8:30 PM with 15-20 minute headways during peak periods. Route 594 – Lakewood/Tacoma-Seattle offers select service to DuPont (see Sound Transit routes and schedules for further information). All stops originate and depart from the DuPont Station located on the southeast corner of Wilmington Drive & Palisade Boulevard, approximately two miles from the subject site and is therefore not anticipated to be significantly utilized by the proposed development's employees.

According to the DuPont's Comprehensive Plan, the City would like to explore adding and expanding transit opportunities as employment and populations continue to grow. As a potential transportation demand measure, and if demand exists, the developer may consider adding a shuttle service to run to and from DuPont Station during employee shift periods as a way to incentivize and encourage alternative modes of transport.

3.3 Non-Motorist Infrastructure

The adjacent Center Drive and International Place roadways support detached sidewalks along either side and shoulders accommodating bicycle transport. The intersection of the two roadways allows for safe pedestrian crossings facilitated via actuated walk phases controlled by the signal. However, with no transit readily available within the immediate site vicinity, little non-motorist activity to/from the site can be expected.

3.4 Roadway Improvements

A review of the City of DuPont's Six-Year (2019-2024) Transportation Improvement Plan and WSDOT's 2020-2023 Statewide Transportation Improvement Program indicates improvement projects are scheduled within the project vicinity. The most significant project to note is WSDOT's proposed Interchange Exit 119 Redesign:

I-5 Exit 119 Reconstruction – is a proposed redesign of the existing I-5 Exit 119 to increase capacity and allow for a more efficient and safe design. The scope of work include removing a portion of Barksdale Avenue, east of Steilacoom-DuPont Road and constructing a new grade-separated southbound exit. Also proposed are new I-5 Northbound and Southbound Bypass routes to Steilacoom-DuPont Road and the JBLM DuPont Gate. See appendix for WSDOT's design exhibits. The project is currently undergoing environmental studies and the construction is estimated to be completed in 2025.

As part of WSDOT's involvements with the I-5 Exit 119 Reconstruction, the City has established a number of improvements along Steilacoom-DuPont Road from the proposed Exit 119 location to Wharf Road including intersection improvements at Center Drive.

Other City improvement projects consist of traffic signal modernization and coordination from I-5 Exit 118 to Steilacoom-DuPont Road; however, these projects have not secured funding and are in the preplanning stages. Given the time horizons of the planned improvements, no projects were considered in the forecast horizon analysis as they would not be completed at such time.

3.5 Baseline Intersection Volumes

In order to assess and evaluate the project impacts relative to the adjacent street system, a number of outlying intersections were selected for evaluation by the City. All intersections are signalized controlled and turning movement count data were provided in the scoping request through the City. Timeframes examined in this analysis consist of the AM peak period (7:00-9:00 AM) and the PM peak period (4:00-6:00 PM) as these periods generally represent the highest congestion points of a typical weekday.

Data were available from 2019 for all locations with the exception of two intersections. These two intersections were from 2017 and have been adjusted via a two percent compound annual growth rate. Listed on the following page are the study intersections with respective AM and PM peak hour volumes illustrated in Figure 3A & 3B. Full count sheets and baseline volumes are included in the appendix.

3.6 Baseline Level of Service

Baseline peak hour delays were determined through the use of the *Highway Capacity Manual* 6th Edition. Capacity analysis is used to determine level of service (LOS) which is an established measure of congestion for transportation facilities. The range¹ for intersection level of service is LOS A to LOS F with the former indicating the best operating conditions with low control delays and the latter indicating saturated conditions with heavy control delays. Detailed descriptions of intersection LOS are given in the *2016 Highway Capacity Manual*. Level of service calculations were made through the use of the *Synchro 10* analysis program. Table 2 below summarizes existing peak hour delays at the eight study intersections. For signalized control, LOS is determined as the overall average delay experienced by the intersection. Delays are reported in seconds per vehicle.

Table 2: Existing Peak Hour Level of Service

Map ID	Intersection	Control	Peak Hour	LOS	Delay
1	Barksdale Ave & Steilacoom DuPont Rd / Wilmington Dr	Signal	AM	C	24.0
			PM	C	24.4
2	Center Drive & Steilacoom DuPont Rd	Signal	AM	B	14.3

			PM	B	12.9

¹ *Signalized Intersections - Level of Service*

Level of Service	Control Delay per Vehicle (sec)
A	≤ 10
B	> 10 and ≤ 20
C	> 20 and ≤ 35
D	> 35 and ≤ 55
E	> 55 and ≤ 80
F	> 80

Highway Capacity Manual, 6th Edition

Stop Controlled Intersections – Level of Service

Level of Service	Control Delay per Vehicle (sec)
A	≤ 10
B	> 10 and ≤ 15
C	> 15 and ≤ 25
D	> 25 and ≤ 35
E	> 35 and ≤ 50
F	> 50

City of DuPont Level of Service Standards²: The city has an adopted standard of LOS D for most intersections within the City. Exemptions are allowed for Steilacoom DuPont Road's intersections with Barksdale Avenue and Center Drive, which may operate at LOS E.

As shown in Table 2 above, all study intersections are shown to meet City standards operating at LOS C or better for either the AM or PM peak hour periods.

4. FUTURE TRAFFIC CONDITIONS

4.1 Trip Generation

Trip generation can be defined by the number of vehicles entering or exiting a site within a particular time period such as a "peak hour" or an entire day. Vehicular volume estimates have been obtained from the client based on a number of similar hazmat fulfillment centers, which tend to function similarly. Table 3 below summarizes the average weekday daily trips (AWDT) and the AM and PM peak hour volumes. Classifications have been broken down to identify either passenger vehicle/delivery vans versus heavy vehicles (multi-axle).

Table 3: Project Trip Generation

Land Use	Vehicle Type	AWDT	AM Peak-Hour Trips			PM Peak-Hour Trips		
			In	Out	Total	In	Out	Total
Hazmat	Vehicle	1942	336	13	349	296	302	598
Fulfillment Center	Heavy Vehicle	225	7	7	14	3	3	6
Total		2167	343	20	363	299	305	604

Based on data provided by the client, the project can be anticipated to generate approximately 2,167 daily trips, 363 AM and 604 PM peak hour trips. As shown, the majority of trips would be in the form of employee or delivery vehicle/van with few heavy vehicle trips. It should be acknowledged that these volumes represent typical operations or "non-peak" volumes. During peak seasons (i.e., holiday season) volumes to and from the site would increase. According to the aggregated trip generation report, peak season AM peak hour volumes would close to double while peak PM volumes would increase by approximately 50 percent. These volumes, however, are not typical through most of the year. Also to consider, the hazmat fulfillment center's peak hours tend to be dissimilar with respect to the adjacent street. The AM peak hour tends to start at 6:00 or 6:30 AM while the PM peak hour tends to start at 5:30 PM. No volume adjustments were considered given the 7:00-9:00 AM and 4:00-6:00 PM study periods so as to remain conservative.

² 2015 Comprehensive Plan Periodic Update, City of DuPont – Chapter 9 Transportation

4.2 Trip Distribution and Assignment

Trip distribution can be described as the travel routes to/from the subject site relative to the adjacent street system. The specific destinations and origins of the generated traffic primarily influences the key study intersections, which will effectively receive the bulk of project impacts. The trips generated by the project are expected to follow the general trip pattern as shown in Figures 4A & 4B and Figures 5A & 5B for the AM and PM peak hours, respectively. Separate distributions have been assigned to passenger and heavy vehicle trip types. Center Drive, west of the site, has a gross weight vehicle restriction of 14,000 pounds and therefore no heavy vehicles were routed to and from the west.

Additional trip distribution exhibits have been prepared under the following scenarios: Scenario 2 – With I-5 Interchange Project and Scenario 3 – Peak Season Volumes. These scenarios were provided as additional information for the City.

4.3 Future Peak Hour Volumes

A two-year horizon of 2022 was used for future delay analysis. The proposed building is already constructed and the developer would intend to occupy late 2021 or early 2022. Forecast 2022 background volumes were estimated by applying two assumptions: planned projects in the City that would act as pipeline; and a general background growth rate to account for other miscellaneous growth. Pipeline projects were obtained through the City and are included in the appendix. The aggregate AM and PM peak hour intersection pipeline volumes are illustrated in Figures 6A & 6B.

A general two percent compound annual growth rate was similarly applied to all existing volumes. Forecast 2022 AM and PM peak hour volumes without project (pipeline and background growth only) and with project are presented in Figures 7A & 7B and Figures 8A & 8B, respectively.

4.4 Future Level of Service

Level of Service calculations were made for future conditions without (background) and with project-generated traffic added to the adjacent street network. Table 4 below portrays forecast LOS delays for the intersections of study.

Table 4: Forecast 2022 Peak Hour Level of Service

Delays given in seconds per vehicle

Map ID	Intersection	Control	Peak Hour	Without Project		With Project	
				LOS	Delay	LOS	Delay
1	Barksdale Ave & Steilacoom DuPont Rd / Wilmington Dr	Signal	AM	C	26.2	C	27.0
			PM	C	26.8	C	28.9
2	Center Drive & Steilacoom DuPont Rd	Signal	AM	C	21.0	C	30.9
			PM	B	17.7	C	29.4
3	Center Drive & International Place N	Signal	AM	A	2.8	A	8.3
			PM	A	3.1	B	13.7
4	Center Drive & Civic Drive	Signal	AM	A	5.6	A	6.1
			PM	A	6.8	A	7.1
5	Center Drive & Palisade Blvd	Signal	AM	A	6.3	A	6.7
			PM	A	7.2	A	7.3
6	Center Drive & Bob's Hollow Ln	Signal	AM	B	13.4	B	13.6
			PM	B	12.2	B	12.8
7	Center Drive & McNeil Street	Signal	AM	B	14.9	C	26.1
			PM	C	30.7	D	42.3
8	Center Drive & Wilmington Drive	Signal	AM	A	9.1	A	9.2
			PM	B	14.0	B	14.4

As shown in Table 4, all study intersections are anticipated to remain meeting the city of DuPont's LOS D standards. No operational deficiencies are identified as a result of the project.

4.5 Queuing

As part of the project evaluation, the City requested two specific movements to examine in terms of vehicle queuing: northbound left-turns at Steilacoom DuPont Road & Center Drive and eastbound left-turns at Center Drive & International Place N. A queuing analysis can determine whether there is sufficient storage capacity to accommodate turning demands during peak periods and avoid any spillover to the advancing through lanes.

Queues were estimated through the use of *SimTraffic*, a traffic simulation modeling program, in conjunction with *Synchro 10*. Using peak hour volumes under forecast 2022 conditions, 5 one-hour simulations were performed under each scenario to determine average queue lengths. As requested, the project's "non-peak" and "peak" conditions were both evaluated. Queue outputs are summarized in the table below.

Table 5: Forecast 2022 Queuing

Center Street at	Approach	Non-Peak Season				Peak Season			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Avg.	95 th	Avg.	95 th	Avg.	95 th	Avg.	95 th
Steilacoom DuPont Rd	NB LT	267'	303'	221'	308'	270'	296'	255'	311'
International Place	WB LT	52'	92'	66'	113'	69'	71'	95'	157'

Center Street & Steilacoom DuPont Road: is a signalized intersection offering approximately 250-feet of storage for the northbound left-turn before the lane striping transitions into a two-way left-turn lane. The max queue was estimated at 311 feet, which exceeds the storage capacity. However, no driveways exist south of the intersection where blocking conflicts would occur. Additional green time allocation and signal timing adjustments for the northbound left-turn phase could be implemented, should queuing become an issue.

Also of note: intersection improvements are identified at this location under the City's Six Year Transportation Improvement Plan. A consideration may be for the City to examine the benefits of dual northbound left-turn lanes. Dual left-turn lanes are generally considered when left-turn volumes exceed 300 vehicles per hour³ provided that opposing volumes are moderate to high. Dual left-turn lanes can also allow for a shorter cycle while increasing left-turn capacity and allocate green time to other critical movements. However, with no queuing conflicts and acceptable service levels, dual left-turn lanes may not be needed until further demand and growth occur.

Center Drive & International Place: has recently been converted from stop-control to signalization with a new stop-bar and crosswalk located along the west leg. The eastbound left-turn lane has approximately 125-feet of storage as delineated by the solid white lane marking. An additional approximately 50 feet is available as the deceleration area before the tapers begin which can also be used to store vehicles under congested conditions. In total, approximately 175-feet of storage capacity is available which is shown to accommodate forecast peak demands under all scenarios.

³ Federal Highway Administration Research and Technology

5. SUMMARY

Snow Blossom Fulfillment Center proposes to occupy an approximate 612,412 square foot warehouse for the use of a hazmat fulfillment center. The subject site is located on the northwest corner of Steilacoom DuPont Road & Center Drive and has multiple access driveways along International Place N. A site plan illustrating the building and parking configuration is presented in Figure 2.

The site can be expected to generate approximately 2,167 average weekday daily trips with 363 trips occurring during the AM peak hour and 604 during the PM peak hour. These volume estimates were derived from data provided by the client from a number of similar facilities and are representative of typical operations. Additional volume increases would be expected during the peak holiday season with volume and distribution estimations supplied in the appendix. The majority of traffic would be in the form of employee vehicles and delivery vans with relatively low amounts of heavy vehicles. A total of eight intersections within the city were selected for examination as part of this impact analysis. Existing conditions and a list of the study intersections are summarized in Table 2.

A two-year horizon was analyzed to assess project impacts subsequent to occupancy. Background growth rates and traffic volumes from nearby planned developments were included in the forecast analysis. All study intersections are shown to continue to meet the City of DuPont's LOS D standards for both AM and PM peak hours. No intersection or operational deficiencies were identified as a result of the proposed tenant occupancy. Queuing analyses were performed for the northbound left-turn approach at Steilacoom DuPont Road & Center Drive and the eastbound left-turn approach at Center Drive and International Place N with findings summarized in Table 5. Queuing was shown to exceed the 250-foot storage capacity for the northbound left-turn lane along Steilacoom DuPont Road at Center Drive with approximately 311 feet during the PM peak season period. However, additional storage is available as the lane transitions into a two-way left turn lane with no nearby driveways that would be obstructed. The City may want to consider dual left-turn lanes though the forecast Level of Service was shown to be acceptable. Additional green time allocation or other signal adjustments may also mitigate the left-turn queues.

Based on the findings above, no offsite mitigation is identified at this time.

Intersection Summary

Area Type: Other

Cycle Length: 123

Actuated Cycle Length: 83.2

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 26.2

Intersection LOS: C

Intersection Capacity Utilization 65.4%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Wilimington Dr & Barksdale Ave & Steilacoom Dupont Rd SW

Intersection Summary

Area Type: Other

Cycle Length: 123

Actuated Cycle Length: 84.4

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.83

Intersection Signal Delay: 27.0

Intersection LOS: C

Intersection Capacity Utilization 71.0%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Wilimington Dr & Barksdale Ave & Steilacoom Dupont Rd SW

HCM 6th Signalized Intersection Summary 2: Dupont-Steilacoom Rd & Center Drive

Intersection Summary

Area Type: Other

Cycle Length: 123

Actuated Cycle Length: 89

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.80

Intersection Signal Delay: 28.9

Intersection LOS: C

Intersection Capacity Utilization 64.1%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Wilimington Dr & Barksdale Ave & Steilacoom Dupont Rd SW

HCM 6th Signalized Intersection Summary

2: Dupont-Steilacoom Rd & Center Drive

Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 39.7

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.24

Intersection Signal Delay: 3.1

Intersection LOS: A

Intersection Capacity Utilization 31.6%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 3: Center Drive & International Pl

HCM 6th Signalized Intersection Summary 4: Center Drive & Civic Drive

Intersection Summary

Area Type: Other

Cycle Length: 123

Actuated Cycle Length: 89

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.80

Intersection Signal Delay: 28.9

Intersection LOS: C

Intersection Capacity Utilization 64.1%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Wilimington Dr & Barksdale Ave & Steilacoom Dupont Rd SW

HCM 6th Signalized Intersection Summary 2: Dupont-Steilacoom Rd & Center Drive
